# OWENS CORNING INSULATION PRODUCTS GREENGUARD™ CERTIFIED FOR SUPERIOR INDOOR AIR QUALITY PERFORMANCE

## PINK HAS ALWAYS BEEN GREEN

Owens Corning's fiber glass and foam building insulation products are now GREENGUARD Indoor Air Quality Certified™ (IAQ). Look for the GREENGUARD mark on our products to be assured you are purchasing the best materials to keep indoor air quality free from harsh pollutants.

North Americans spend more than 90 percent of their time indoors where air can be as much as 100 times more polluted than outside air. Thousands of chemical and biological pollutants can be found indoors, many which can have a significant impact. Improved IAQ is more important than ever to the indoor environment, especially for the increasing number of people with respiratory ailments and allergies.

## CERTIFICATION THAT COUNTS

What does GREENGUARD Certification mean? Certified products are tested using stringent environmental chamber methods and are proven to be low emitting and contribute minimal levels of pollutants to indoor environments. Products are retested annually with certain critical components of each product being monitored quarterly.

The GREENGUARD Certification program for interior products and building materials is the only scientifically-based testing program for low-emitting products. The GREENGUARD Environmental Institute™, an independent, non-profit organization administers the certifications.

The organization was founded to create better indoor environments and improve public health and quality of life, thereby guiding manufacturers in building better and safer products.

## TESTING, THE INSIDE SCOOP

Products are tested in a dynamic air chamber where purified air flows into the chamber and exhaust air samples are collected. The process models airflow patterns in rooms and buildings. Products are tested to determine emissions of formaldehyde, volatile organic compounds, respiratory particles and other pollutants. The tests are designed to simulate product use in typical indoor environments and follow the stringent test methods established by Air Quality Sciences, Inc. Test protocols comply with established American Society of Testing Materials (ASTM), and the U.S. Environmental Protection Agency (USEPA) practices and procedures.

## A BETTER ENVIRONMENT

Our GREENGUARD Certified insulation products give you peace of mind about indoor air quality. Our insulation products also make the outside environment a better place to live and breathe. By making homes as energy efficient as possible, our products help reduce energy consumption and emissions that are harmful to the outside environment. Not to mention, Owens Corning's products contain recycled materials, 50% in fiber glass and 15% in foam products, allowing us to consume less energy during manufacturing and produce less waste.

Trust Owens Corning to produce a wide variety of fiber glass and foam insulation products that are friendly to the environment inside and out.
